# **NO MORE GAS LINES**

**CONVERT YOUR  
PORTABLE GENERATOR  
TO PROPANE OR  
NATURAL GAS**

**You bought a  
portable generator  
so you won't have to  
hassle with an outage.**

**Why put up with  
the hassle of an  
unreliable fuel source.**

**Convert you gasoline  
portable generator  
to run on the most  
stable, reliable  
fuel sources available:  
propane or natural gas.**

## IT'S AVAILABLE

20 pound propane bottles are readily available at nearly any grocery, convenience store, or gas station. If natural gas is available at your home, you can tap into that same gas line to fuel your portable.

## COMMERCIAL GRADE POWER

Commercial generators do not run on gasoline, they run on natural gas or propane. Businesses and health care centers require a dedicated, reliable fuel source for mission critical operation. Converting your portable gives you commercial grade power.

\*U.S. Carburetion. "Propane Consumption Rate" Web. 2014. <<http://www.motorsnorkel.com/propane-consumption-rate>>

## IT'S RELIABLE

Natural gas and propane are non-corrosive, and will not gum up like gasoline over a short period of time.

## MORE RUN TIME

Run time for one 20 pound propane bottle is similar to one gasoline fill. A 5000 watt portable will run about 8.8 hours on one 20 pound propane bottle\*. Pair up with multiple or larger tanks, and you will have fuel for days.

## ...AND YOU CAN STILL USE GAS

You can easily run gasoline again by disconnecting the conversion kit from the fuel tank, and go back to running on gasoline.

# \$495<sup>00</sup> Installed\*\*

## Includes:

Propane Conversion Kit

Installation of Kit at Our Service Department

12' Flexible Hose with Quick

Disconnect for Fuel

(Extended Hoses are Available)

Tell us the model and manufacturer of your portable and your fuel source of either propane or natural gas. Pricing is for customer drop off of generator at our service department with later pick up. If you would like the kit installed at your home, there is an additional trip charge. If you do not have your portable connected to your electrical panel, we can provide the unit and installation of a manual transfer switch.

*\*\*\$495.00 pricing is for portable generators 8000 watts and below. Additional kit pricing for generators above 8000 watts can be provided. Does not include generator, fuel source, or electrical connection to home. For natural gas you will need a licensed plumber to provide the connection to your natural gas meter. For larger sized propane tanks, you may need a licensed plumber to provide the propane connection and tanks.*
